

New Gas Kit for the Milestone DMA-80

A new module for the determination of mercury in gases is available for the Milestone DMA-80. Gas samples are collected by a syringe or by Tedlar gas sampling bags, and then directly introduced in the DMA-80. A schematic representation of the entire process is shown below.

The gas kit consists of an injection block and a vacuum pump, which allow the flowing of the sample through the DMA-80 furnaces, amalgamator and spectrometer.

Benefits

- » Direct mercury determination at trace level in gases
- » Fast analysis: approximately 3 minutes per sample
- » Wide dynamic range: from 0.015 to 1200 $\mu\text{g}/\text{cubic meter}$
- » Ease of use

Applications

Environmental

- Health and Safety
- Hazmat mercury response
- Workplace monitoring
- Mercury spill screening
- Mercury surveys
- Investigation of contaminated sites
- Environmental monitoring
- Hazardous waste inspection

Petrochemical

- Natural Gas
- Biogas
- Gas processing

Sorbent Traps

for the Milestone DMA-80

Sorbent traps are available for the Milestone DMA-80 to measure the mass concentration of Mercury in gases, including elemental Mercury (Hg^0) and oxidized forms of Mercury (Hg^{+2}) in micro-grams per dry standard cubic meter ($\mu\text{g}/\text{dscm}$). Gases are collected onto the sorbent tubes by specific devices first.

At the completion of the sampling process, the sorbent tubes are directly placed on the DMA-80 auto-sampler and analyzed.

Benefits

- » High quality analysis
- » Low mercury effect
- » High recovery > 98.5 % at 1000 ng
- » High recovery for both Hg^0 and Hg^{+2} forms
- » High recovery in presence of moisture
- » Reusable sorbent traps
- » Easy to use: simply place it on the autosampler
- » Best quality-price
